

Extra information

- You can install WSL2 in Windows to run the doDec.sh and doDec_upscale.sh

A screenshot of a terminal window titled 'Ubuntu'. The terminal displays the Ubuntu 24.04.2 LTS boot message, including the kernel version (GNU/Linux 6.6.87.2-microsoft-standard-WSL2) and architecture (x86_64). It lists links for documentation, management, and support. Below that, it shows system information as of Thursday, May 7, 2026, at 21:17:23 CST. The system load is 0.0, usage of / is 0.3% of 1006.85GB, memory usage is 2%, and swap usage is 0%. There are 79 processes, 0 users logged in, and the IPv4 address for eth0 is 172.23.91.58.

```
Ubuntu
Welcome to Ubuntu 24.04.2 LTS (GNU/Linux 6.6.87.2-microsoft-standard-WSL2 x86_64)

 * Documentation:  https://help.ubuntu.com
 * Management:    https://landscape.canonical.com
 * Support:       https://ubuntu.com/pro

System information as of Thu May  7 21:17:23 CST 2026

System load:  0.0                       Processes:            79
Usage of /:   0.3% of 1006.85GB          Users logged in:     0
Memory usage: 2%                       IPv4 address for eth0: 172.23.91.58
Swap usage:   0%
```

Version of ffmpeg

- Newer version of ffmpeg complains about “-vsync 0” used in the doDec.sh and doDec_upscale.sh scripts

```
-vsync is deprecated. Use -fps_mode  
Passing a number to -vsync is deprecated, use a string argument as described in the manual.  
[rawvideo @ 0x5ec7f3b59040] Estimating duration from bitrate, this may be inaccurate
```

- If the scripts still run, you do not have to do anything
- If the scripts do not run owing to this “-vsync 0”, change it from “-vsync 0” to “-fps_mode passthrough”

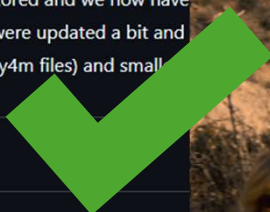

When using YUView, select 10-bit pixel

- Use YUView $\leq$ 2.13, 2.14 may not work

YUView 2.13

It is time for another release with the following things:

- The FFmpeg code was refactored and we now have
- The color mapping dialogs were updated a bit and
- Some bugs fixed (e.g. Large y4m files) and small

Public

Video file .yuv prefix

- Video frames are indexed from 0 (0, 1, 2, 3, 4, 5, 6)
- Prefix “odd_” means the .yuv files are with odd frames (1, 3, 5, ...)
- Prefix “even_” means the .yuv files are with even frames (0, 2, 4, ...)

Python package dependency

- To calculate BD-rate by the Python script like `testOddFramesXXX.py`, the only library dependency is “numpy”. Be sure to install numpy before running the scripts.
- Extra suggestion (optional)
 - Re-write the Python scripts with C++ to accelerate the speed of calculating BD-rate if you expect there will be a lot of iterations of your algorithm
 - AI can help!
